SAKSHI SANTOSH WALKE

Web Developer | Product Design Enthusiast

8104886201 | walkesakshi19@gmail.com | LinkedIn

Skills

SKILLS | Prototyping • User Research • GenAI, •Vibe Coding • Web Development, Database Management

TECHNICAL SKILLS | HTML • CSS • Python (t-kinter,Streamlit, Seaborn, Matplotlib, Flask,) • JavaScript(Basic) • React • SQL • MongoDB

Summary

Full-stack developer skilled in Python (Flask), JavaScript, React, PHP, and MySQL, with hands-on experience building end-to-end web applications — from database-backed platforms to AI-integrated tools. Experienced collaborating on projects involving machine learning, NLP, and LLM APIs (OpenAI/Gemini), with a focus on frontend/backend architecture and using AI-assisted development to accelerate delivery. Strong track record of shipping functional, user-facing products in team settings.

Projects

AI-Based Timetable Generator (Python (Flask), JavaScript, HTML/CSS, Bootstrap, DuckDB, OpenAI/Gemini API)

- Built a web application that auto-generates conflict-free academic timetables, handling faculty availability, room capacity, and batch allocation constraints
- Developed UI enhancements including dynamic department/year dropdowns and selection workflows; contributed to import/export features (CSV, XLSX, PDF)
- Integrated an LLM (OpenAI/Gemini API) with basic NLP techniques to parse scheduling constraints and power an in-app chatbot explaining the generated timetable
- GitHub: GitHub AI_based_Timetable_generator

Student Placement Prediction (Python, Streamlit, Scikit-learn)

- Built a Streamlit web app that predicts student placement outcomes (Placed/Not Placed) from academic and training data, using a model trained with Stratified K-Fold CV and F1-optimized threshold tuning
- Designed the report-card style UI, including a placement probability gauge and a radar chart benchmarking a student's profile against cohort medians
- GitHub: GitHub_Placement_prediction

Roommate Finder (PHP, HTML, CSS, JavaScript, MySQL)

- Developed a full-stack web platform to match users looking to share an apartment or find a roommate, with user authentication and profile management backed by a MySQL database
- Designed a compatibility questionnaire (habits like smoking/drinking, budget, location, pet-friendliness, gender, age, dietary preference) and built the matching logic to pair compatible profiles
- Owned end-to-end development of the frontend and backend

AI-Based Interview Platform (React, JavaScript, Python, HTML/CSS, OpenAI GPT API, CNN (RAF-DB))

- Built a full-stack platform enabling candidates to practice mock interviews and recruiters to schedule interviews, with configurable subject, difficulty, and question count
- Implemented real-time webcam-based emotion detection during interviews using a CNN trained on the RAF-DB dataset
- Integrated the GPT API to dynamically generate and evaluate interview questions, and built an NLP resume parser to extract candidate skills/projects for recruiter-scheduled interviews to auto-generate targeted questions
- Led frontend and backend development, using AI coding assistants (vibe coding) to accelerate implementation while collaborating with teammates on the ML/NLP components
- GitHub : GitHub_AI_Interview

Personal Finance Management Dashboard (JavaScript, React, HTML/CSS)

- Built an interactive personal finance dashboard with dynamic charts and visualizations to track spending, budgets, and financial trends

- Focused on frontend architecture and data visualization components, leveraging AI coding assistants to speed up development

Education

B.E., Computer Science Pillai College of Engineering **Expected Graduation: 2027** **CGPA: 7.16**
